                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an isolated nucleic acid molecule, which encodes a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test II-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for Human TIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated nucleic acid molecules encoding T cell inducible factors, useful as markers for expression or effect of interleukin (IL)-9 in a subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dumoutier

                                                                                                                  The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (IL-21) TIF polynucleotides are upregulated by the cytokine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is human TIF genomic DNA located on chromosome 12.
                                                                                                                                                                                                                                                                                                          Stimulating expression of STAT transcription factor and inducing production of acute phase protein in a cell, involves contacting capable of expressing STAT with T cell derived inducible factors
                                                                                                                                                                                                                                                                      Claim 6; Page

The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is

New nucleic acid molecule encoding for treating asthma, an allergy or a T cell derived inducible factor lymphoma

Claim 1; Page 39-40; 46pp; English

This DNA encodes a human T cell derived inducible factor (TIF). The gene can be mapped to chromosome 12q15. The human TIF was identified based on the chromosome to the human TIF was identified based on the chromosome to the human TIF was identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of therleukin 9 (II-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs expressed in the presence of IL-9, but not in its absence. TIFs induce the creation of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a compounds that inhibit or activate T cell induced factor activity in a

```
The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test II-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecular promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence a partial genomic sequence for mouse TIFalpha.

IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF alpha genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

The nucleic acid molecules are shown to be up regulated by the cytokine interleukin-9 (II-9) and are described as T cell berived Inducible Factors (IIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is

Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of asthma, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA encodes T cell derived inducible factor (TIF) alpha identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of interleukin 9 (IL-9). BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid molecule encoding for treating asthma, an allergy or

```
This DNA encodes T cell derived inducible factor (TIF) beta identified CC by subtraction cloning from a murine lymphoma cell line BW5147 in the CC presence or absence of interlaukin 9 (II-9). As compared to the coding CC region for TIF-alpha (see AAA28816), that of TIF-beta has six silent CC changes. There are two changes which result in an inconsequential amino CC acid change (at both of positions 36 and 103, Val in TIF-alpha becomes CC II2, where Gln becomes Arg, Many II-9 activities are mediated by CC activation of STAT transcription factors. The novel TIFs were expressed CC in the presence of II-9, but not in its absence. TIFs induce STAT CC activation of targeted tissues. Their inhibitors or antagonists can be CC used to retard, prevent or inhibit differentiation of other tissues. The CC used to retard, prevent or inhibit differentiation of other tissues. The CC IIFs and their coding sequences are useful in the treatment of asthma, CC allergies and lymphoma (claimed). They are also useful for identifying CC compounds that inhibit or activate T cell induced factor activity in a cC cell (claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   exon

                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test IL-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid molecules encoding T cell inducible useful as markers for expression or effect of interleukin (IL) subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mus musculus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer; lymphoma; immune system disorder; allergy; asthma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (IL-21). TIF polymucleotides are upregulated by the cyockine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is mouse TIF beta genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Snw

The nucleic acid molecules are shown to be up regulated by the cycokine interleukin-9 (IL-9) and are described as T Cell Derived Inducible Factors (TIFs). The invention is used in protein therapy. The nucleic acid molecules encode proteins which induce STAT activation in cells. They can be used, for example, in the stimulation of regeneration of targetted tissues. Further, their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The present sequence is mouse TIF beta genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic

This cDNA encodes a human T cell derived inducible factor (TIF). The was mapped to chromosome 12q15. The human TIF was identified based on homology to a murine TIF, which was identified by subtraction cloning from a murine lymphoma cell line BW5147 in the presence or absence of
                                                                                                                                                                                                                                                                                                                          CDS

BW5147, can be grown in vitro, without the need to add any cytokines to its culture medium. Many IL-9 activities are mediated by activation of STAT transcription factors. The novel TIFs were expressed in the presence of IL-9, but not in its absence. TIFs induce STAT activation in cells. They can be used, e.g. in the stimulation of regeneration of targeted tissues. Their inhibitors or antagonists can be used to retard, prevent or inhibit differentiation of other tissues. The TIFs and their coding sequences are useful in the treatment of astima, allergies and lymphoma (claimed). They are also useful for identifying compounds that inhibit or activate T cell induced factor activity in a compounds that inhibit or activate T cell induced factor activity in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 690

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule, which encode a T cell derived inducible factor (TIF) which are upregulated by the cytokine interleukin-9 (II-9) and induce STAT transcription factor activation. The TIF proteins (or their muteins) may be used to test II-9 ant/agonists for their potency against lymphomas, immune system disorders, allergies, asthma, acquired immunodeficiency syndrome (AIDS), autoimmune diabetes and thyroiditis. TIF molecules promote regeneration or inhibit differentiation of tissue types in which they are active and therefore be used to develop treatments for melanomas and hepatomas. The present sequence encodes human TIF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid molecules encoding T cell inducible factors, useful as markers for expression or effect of interleukin (IL)-9 in a subject and diagnosing susceptibility to asthma or allergy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acid molecules encoding T cell derived inducible factors (TIFs) also known as interleukin-21 (IL-21). TIF polynucleotides are upregulated by the cytokine, IL-9. IL-TIF or IL-21 molecules are implicated in activation of STAT transcription factors, acute phase proteins and inflammation. The present sequence is human TIF cDNA. The TIF gene is located on chromosome 12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 6; Page 55-56; 64pp; English.
